

# RAHUL SHUKLA

## Senior Specialist Engineer

+91-9650296927 • rahulshukla0312@gmail.com • <https://www.linkedin.com/in/rahul-shukla-qa/> • New Delhi

### Summary

Experienced QA Engineer with 10+ years in Agile environments, skilled in UI/API automation using Cypress and Selenium. Proven success in telecom, insurance, and finance, with a focus on test strategy, risk mitigation, and quality improvement. Strong in delivering scalable automation and ensuring compliance with standards.

### Skills

- Playwright, Cypress and Selenium WebDriver
- API testing and Postman
- CI/CD integration (Jenkins, GitHub Actions)
- Core Java and JavaScript
- Framework development (Hybrid, POM, BDD - Cucumber)
- UI automation and system testing
- Reporting (Allure, Mochawesome)
- Test data management using dynamic data (Faker, Mock APIs)
- Test strategy and planning
- Defect tracking and lifecycle management
- Manual testing (functional, regression, UAT)
- Test case design and execution
- Agile and Scrum methodologies
- Team management and mentoring
- Team handling
- Version control with Git and GitHub

### Experience

#### Successive Technologies

Senior Specialist Engineer

Noida

08/2022-Present

#### Project: AKQA Hesta

- Implemented UI automation using Playwright with a BDD framework, integrated Allure reporting for detailed test insights.
- Utilized Cursor AI to accelerate and enhance the quality of automation script development.
- Reduced manual effort and significantly decreased sanity testing time through automation.
- Contributed to ticket validation and regression checks, ensuring smoother sprint execution and faster release cycles.
- Performed content validation on AEM and Contentstack platforms to ensure content accuracy and consistency.
- Validated website functionality across multiple screen resolutions and devices to maintain responsive design standards.

#### Project: Paya CP

- Improved test coverage from 10% to 55% by systematically clearing the automation test backlog.
- Scaled automation suite to 500+ test cases, designing and maintaining smoke, sanity, and regression suites integrated into CI/CD pipelines.
- Enhanced the UI automation framework by implementing the Page Object Model (POM) architecture using JavaScript and Node.js for Angular-based applications.
- Leveraged GitHub Copilot to accelerate test development and improve code quality across automation script.
- Collaborated with developers to standardize and implement data-automation-id attributes, improving locator reliability and test stability.
- Designed and developed a REST API automation framework using Cypress from scratch, enabling end-to-end API validations.
- Automated tests using dynamic test data and mock API responses in Cypress for robust and reusable scripts.
- Utilized AWS services for validating dynamically generated data in backend DynamoDB tables, executing scenario-specific checks, and monitoring application logs for debugging and test verification.
- Mentored and coached entry-level and junior QA engineers, enhancing team capabilities and overall testing proficiency.
- Executed multiple proof-of-concepts (POCs) focused on SMS validation, email functionality testing, and visual regression automation (Percy).

#### Atdiv India Private Limited

Senior QA Engineer

Remote

01/2022 - 07/2022

#### Project: Voyage SMS

- Implemented Cypress Mochawesome reporting with Slack integration, enabling real-time test result notifications.
- Developed and maintained end-to-end (E2E) automation tests, significantly reducing defect slippage and improving release confidence.
- Increased test coverage from 35% to 75%, reducing regression testing time and improving overall test efficiency.
- Collaborated with junior QA engineers to design a robust and maintainable test automation framework following best practices.
- Performed manual validation of critical tickets during teammate absence, ensuring sprint continuity and quality standards.
- Created end-to-end QA documentation including test cases, test plans, designs, and bug reports for leadership review.
- Delivered weekly test summaries, defect trends, and custom dashboards to track quality metrics and testing progress.

Project: Claim Colony Books and Claim Colony Financials

- Maintained and optimized the Cypress automation framework for a ReactJS-based application; executed multiple POCs to improve reporting, reduce test execution time by 35%, and enhance framework stability.
- Estimated and reviewed overall QA efforts as part of sprint planning, contributing to better workload distribution and delivery forecasting.
- Built a scalable API automation framework using Cypress and Postman, with reusable scripts maintained across sprints.
- Set up and maintained CI/CD pipelines in Jenkins with DevOps, enabling automated test execution on every dev build.
- Performed end-to-end GraphQL API testing, validating schema, queries, and mutations with dynamic test data.
- Developed and maintained BDD feature files for API tests, aligned with user stories and executed automatically with each CI build.
- Utilized Apache JMeter to automate performance testing for critical scenarios, ensuring system stability under load.
- Conducted thorough functional and data validation testing using SQL, identifying data integrity issues early in the release cycle.
- Integrated GitHub Copilot to accelerate script development and improve code quality across the automation suite.
- Aligned testing with business goals by collaborating with developers and product owners during Agile ceremonies like stand-ups and sprint planning.
- Documented test cases, plans, and bugs while regularly sharing defect metrics and dashboards with leadership.

Infosys Limited  
Test Engineer

Pune

Project: at&t and Cox Communication

07/2015 - 04/2019

- Performed Regression, System Integration Testing (SIT), and User Acceptance Testing (UAT) to ensure end-to-end application quality.
- Authored and managed test cases, high-level scenarios, and defect reports using HP ALM.
- Developed and maintained automated test scripts using Java, TestNG, and Selenium WebDriver, reducing regression testing time by over 50%.
- Conducted cross-platform testing on Android, iOS, and web browsers including Chrome, Firefox, and Edge to prevent defect slippage.
- Created and executed robust automation scripts with Selenium WebDriver and Core Java in Eclipse IDE.
- Executed exploratory testing to uncover UI and usability issues not covered by test cases.
- Performed backend data validation using basic SQL queries to ensure data consistency across APIs and the UI.
- Collaborated with Product Owners in sprint demos and actively participated in daily scrums, retrospectives, and triage meetings to ensure agile alignment.
- Logged and tracked defects using JIRA, participated in triage meetings, and ensured timely resolution.
- Conducted basic API testing using Postman, validating RESTful service endpoints and response payloads.

## Education
